

Department of  
Environmental  
Conservation

Dear Neighbor:

We are writing to update you on the construction of the Bay Park Conveyance Project. The Bay Park Conveyance Project is a partnership between the New York State Department of Environmental Conservation and the Nassau County Department of Public Works. Western Bays Constructors (WBC) is the design-builder for this innovative Project.

The Project will convey treated water from the South Shore Water Reclamation Facility at Bay Park (formerly known as the Bay Park Sewage Treatment Plant) to the existing Cedar Creek Water Pollution Control Plant's ocean outfall pipe, which discharges and diffuses treated water three miles offshore in the Atlantic Ocean. As part of this conveyance, the Project repurposes an existing aqueduct beneath Sunrise Highway, using a technique known as sliplining. Sliplining is now complete and WBC is working to restore Sunrise Highway in the areas where the roadway was disturbed.

In the coming days, WBC will return to the former pit site near you to cut and grind the roadway and place the final asphalt layer. This work will extend beyond the boundaries of the former pit site to integrate the restored area with the existing roadway, providing a smooth driving surface. This will conclude the restoration work at the former pit.

Roadway restoration will take place overnight from approximately 9 p.m. to 6 a.m. for approximately two to three nights. A comprehensive Maintenance and Protection of Traffic (MPT) plan is in place to protect the safety of drivers, pedestrians, and workers near the work zone and promote reliable traffic flow. These activities may generate noise and vibrations.

For more information, you may contact us via the Project's 24/7 hotline at (516) 252-6121 or email us at [bayparkconveyance@gmail.com](mailto:bayparkconveyance@gmail.com) with any questions.

Respectfully,

**The WBC Community Outreach Team**
